

## Microsoft Windows Home Server

### Centralize your Data

Manage all of your Data in one place. Easily accessible from all Computers on your Network and securely shared with those you trust outside of your home or business

### Stream music and video

Using Media extenders your media can be streamed to any Digital Media Player or TV by wireless or wired networking

### Simplify your digital life

All of your documents, digital photography, music and video can be organized and the Home Server is so much more than just a Network Storage Device

- Simple automatic backup of all computers, with disaster recovery rebuilds a quick and easy process
- Peace of mind that all of your files including your photographs, music and video files are backed up and safe from loss
- Easy management through a console with no great technical knowledge required to keep it running and trouble free
- Access your files from your Shared Folders on your SOHO network or from wherever you are outside of your network. \* Remotely access any computer on your network.

Windows Home Server is equally suited to the Small Business with up to 10 computers or for the family with one or more computers. It is an affordable and reliable way to protect your computers and your valuable data. If any computer should fail it can easily be restored or any files or folders recovered from the backup.

Your Home Server can grow with your needs and will sit behind your firewall. It has strong password controls to ensure you can securely protect your network. Using real time network health monitoring the Home Server will alert you to any changes to the condition of any computer on the network.

A Windows Home Server performs the role of your own "In House IT Team" and will provide peace of mind that your computers are protected and monitored. It can be configured to allow Remote Access to your files and computers and once configured you can run programs on computers at your office or home whenever you need to.

Using Windows Home Servers from Tranquil PC or other preferred suppliers we can install a quiet, reliable, expandable and easy to manage device that does not require a screen keyboard or mouse and can be located anywhere on your network.
